Attendance Management

October 08, 2022

Overview

It is hard for teachers to take attendance on paper and then update it on the database manually. So to overcome this manual work the attendance management system will be beneficial.

It is a web app that can be accessed on mobile and desktop. Taking attendance will get easier.

Goals

1. **Easy attendance Management:** The management will get easier as well as taking attendance will also become easier.

2. **Flexible with device:** The web app will be flexible to use with mobiles, laptops, and desktops.

Specifications

It is a web application with python as a backend part. MySql database is used to store attendance records and class records.

Milestones

1. Day Wise Attendance

   The first step will be the app should be able to take attendance according to the particular date and time session.

2. Login Access

   The next step is the teacher's logins will get created and particular teachers will get assigned subjects and respected classes
